

## INFUSION SCORES BIG AT THE IMPACT AWARDS

Thursday November 1<sup>st</sup>

What a way to start the month!

Infusion Development began November in style by winning two awards at the 2007 Microsoft Canada Impact awards held at Toronto's Granite Club on Thursday November 1st, 2007.

Infusion won in two categories: "Custom Development Solution of the Year" and "Information Worker Solution of the Year," and marked Infusion's first year winning at the Impact Awards. Infusion was recognized in both awards for JEPRS (Joint Emergency Planning and Response System) a disaster and planned event management solution developed in association with Catalyst Capabilities International.

JEPRS is currently being deployed in Southern California to assist with fire relief efforts in the region.

Overall, Infusion Development matched Dell Canada for the most awards won for the evening and came into the ceremony with more nominations than any other Microsoft Partner.

"I am so very proud to be a member of this firm and be a part of the great work that we do," says Christian Schneider, Chief Operating Officer, Infusion Development. "A huge thanks to our partners, clients and Microsoft for being a part of this tremendous accolade."

Infusion Development was also named as finalists for:

- (i) Business Process Solution of the Year (City and County Manager)
- (ii) Custom Development Solution of the Year (Executive Dashboard)
- (iii) Business Process and Integration Solution of the Year (City and County Manager)

\*\*\*

### About our Solutions:

**JEPRS** is a real-time crisis and planned event management solution, connecting government officials, including Disaster Managers, Operations Managers and Field First Responders. JEPRS enables easy to use, real-time communication and collaboration over GIS data and incident reporting. Whether in a board room or on the ground, JEPRS provides immediate information and places the right tools in the right hands for the quickest and most effective response.

**City Manager** connects local government by integrating the data from multiple departments. A consolidated, customizable digital dashboard tracks the health of the city and each of its departments against a defined set of key performance indicators (KPI). Call tracking and routing streamlines the citizen-to-government communication process and expedites complaint resolution while reducing overlap.

**Executive Dashboard** enables senior technical executives to track software development progress at a high-level via a scorecard view. The work-items and mile-stones of each project are evaluated in real-time. Executive Dashboard immediately identifies any risks that may come up through the life-cycle of a project.

**About Infusion Development:**

Infusion Development is a world-class technology firm and Microsoft Certified Gold Partner with offices in New York City, Boston, Toronto and London, UK. Infusion offers its clients a full suite of information technology services including consulting, development, training and mentoring. We specialize in the architecture and implementation of enterprise-scale financial systems and mission-critical solutions for some of the world's largest banks and government agencies. We are also one of Microsoft's key partners for evangelism, architecture design sessions, proofs of concept, deployment engagements, training, mentoring and technical writing, with many of our white papers being published on MSDN.

**About Catalyst Capabilities International:**

Catalyst Capabilities International (CCI) is a boutique consultancy firm specializing in international and domestic security and crisis management dedicated to providing *control during chaos*© to clients worldwide regardless of the circumstances.

Founded in 2001, CCI leverages highly experienced, qualified and dedicated professionals to work with private sector, governmental and non-governmental organizations enabling them to accomplish their objectives regardless of the local situation.
